

TRAINING BASE WEEZE

TERRAIN INFORMATION

PERFECTLY PREPARED

RESCUE CITY

Since 2012, Training Base Weeze has been the location for intensive, realistic operational training and is now one of Europe's leading training centers for emergency services such as the fire brigade, police, military, USAR and ARFF. On the site of the former Royal Air Force base, near the Dutch border, emergency services from Germany and abroad can expect an exceptionally diverse training area.

Europe's largest training base continues to grow – always adapted to the operational challenges of today and tomorrow.

A TRAINING GROUND OF SUPERLATIVES

What began with a strong focus on real fire training has now become a European hotspot for state-of-the-art training concepts. Our site offers all kinds of residential, industrial and infrastructure scenarios and can be continuously expanded with modular components and new areas of focus. The "JX5-Summit" building opens up completely new possibilities for simulating high-altitude rescue, urban fire progres-

sion and complex situations such as hostage-taking or evacuations from multi-story buildings.

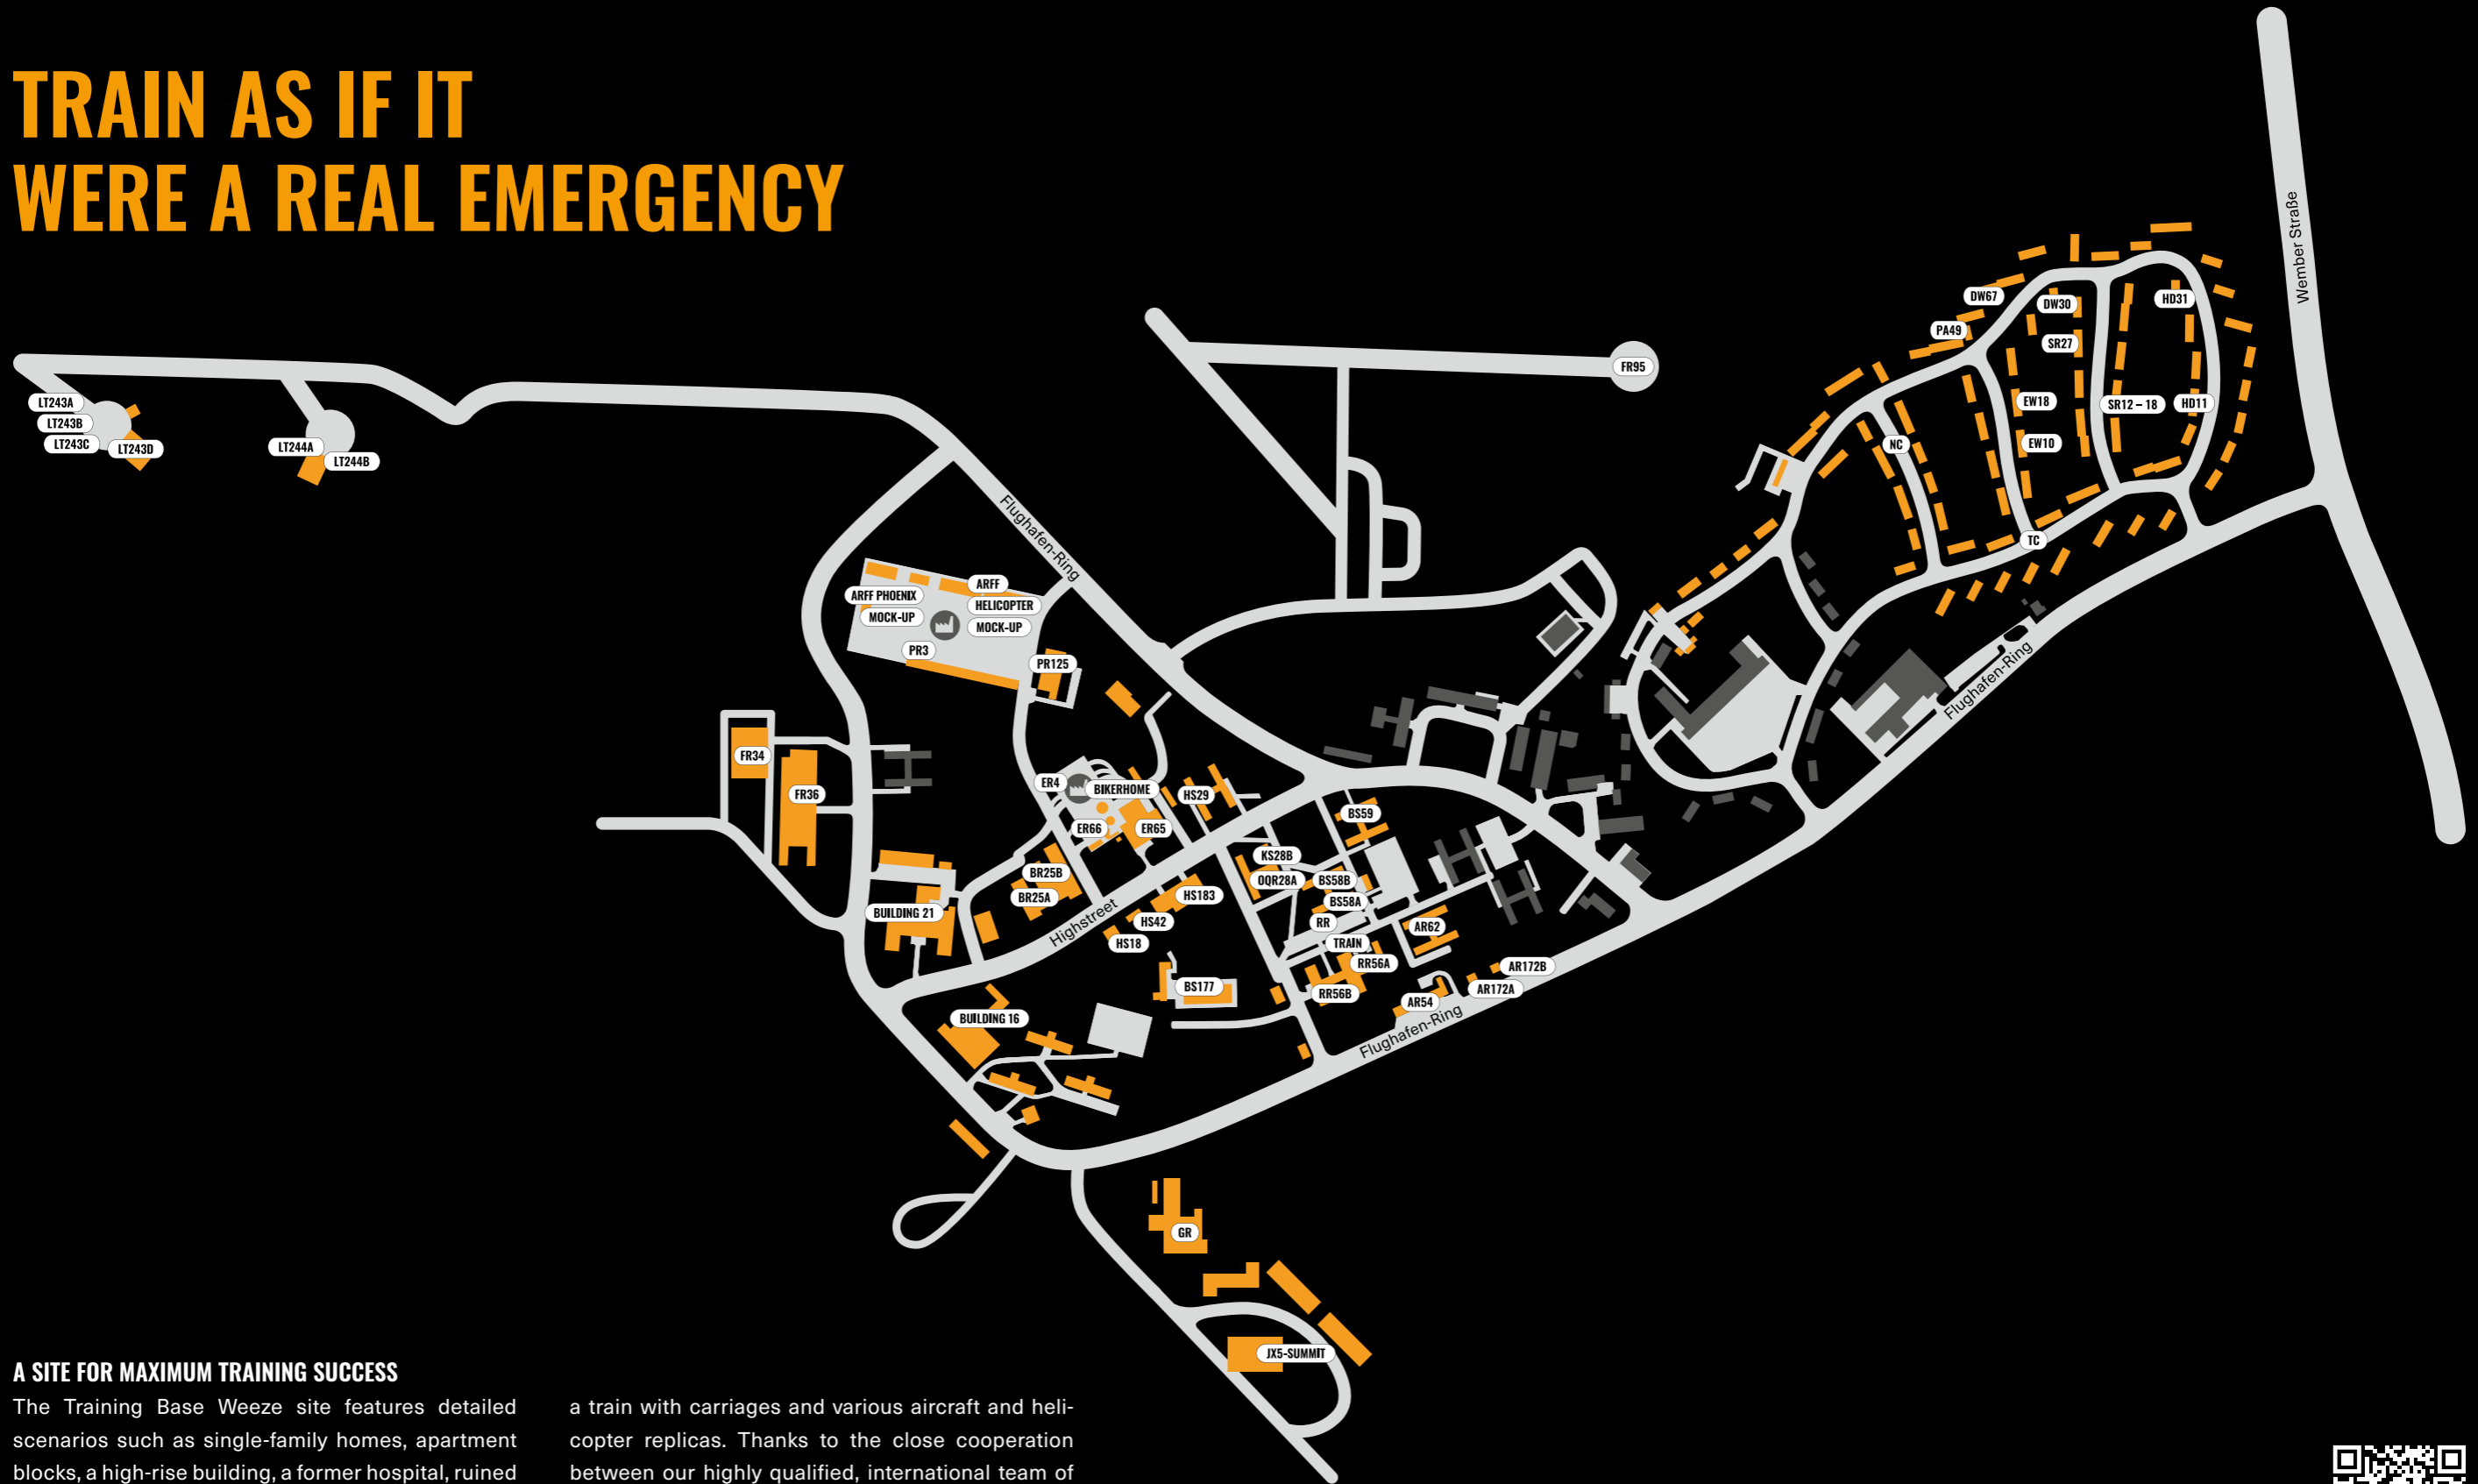

The newly designed briefing rooms serve as a strategic headquarters where situation meetings are held, staff exercises are conducted and concepts for operational safety are developed.

TRAINING FOR THE FUTURE

Thanks to state-of-the-art Virtual Reality technology and flexible training concepts, the Training Base Weeze is a driving force for innovation in digital mission preparation. Virtual Reality allows complex mission scenarios to be trained anywhere, realistically and in a safe environment – a real game changer for the challenges of the future.

TRAIN AS IF IT WERE A REAL EMERGENCY

TRAINING BASE WEEZE Training grounds

A SITE FOR MAXIMUM TRAINING SUCCESS

The Training Base Weeze site features detailed scenarios such as single-family homes, apartment blocks, a high-rise building, a former hospital, ruined buildings, industrial facilities with rail connections, commercial enterprises, a supermarket, school and administrative buildings, an underground car park,

a train with carriages and various aircraft and helicopter replicas. Thanks to the close cooperation between our highly qualified, international team of trainers and technical experts, each training scenario can be flexibly adapted to the desired training objective.

Discover our training ground now.
